❤️ Heart Disease Correlation Dashboard

Heart Disease Risk Factor Analysis

Explore the relationships between health indicators and heart disease status.

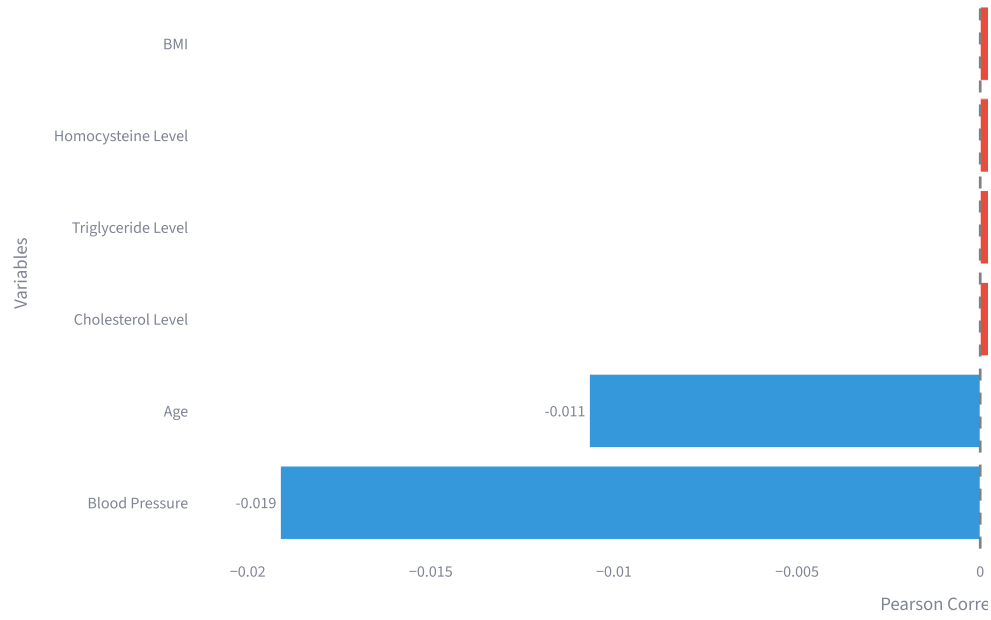

📊 Dataset Overview

Total Records	Valid Records	Heart Disease Cases	Heart Disease Rate
10,000	7,252 ↓ -2,748	1,471	20.28%

📈 Correlation Analysis

Red bars indicate positive correlations, while blue bars indicate negative correlations. Values closer to -1 or +1 represent stronger linear associations.

10 Selected Variables Correlated with Heart Disease

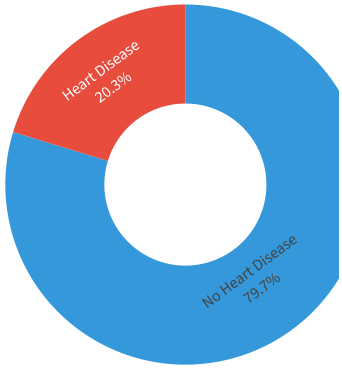

📋 Correlation Statistics

Variable	Correlation	Absolu
BMI	0.0203	
Blood Pressure	-0.0191	
Homocysteine Level	0.0127	
Triglyceride Level	0.0118	
Cholesterol Level	0.0109	
Age	-0.0107
